

THE NEW AIRBORNE DATA OF MOZAMBIQUE

Funded by the World Bank, the Australian Thomson Aviation company was contracted by Mozambican Government to carry out airborne survey (magnetic and radiometric) in the north of Mozambique covering the area shown below.

The survey was carried out between 2014 and 2015 and the data were delivered to the National Directorate of Geology and Mines (DNGM) in binging of 2016.

The delivery data include:

- Magnetic and elevation data in Geosoft GDB format
- Radiometric data in Geosoft GDB format
- A set of grids in Geosoft GRD format
- A set of digital maps in at scale 1:250.000 in JPG format
- A set of digital maps in at scale 1:50.000 in JPG format
- Magnetic and elevation data in Geosoft XYZ format (ASCII)
- Radiometric data in Geosoft XYZ format (ASCII)

The coordinate system of delivered data are in coordinate system UTM37S/WGS84.

The data are available at DNGM Department of Geological Information Management.
